```

Exploratory Data Analysis (EDA) Each dataset may have different characteristics, so first, we:

1. Understand dataset structure (Check file formats, class distributions, missing data, etc.). 2. Visualize sample images (Ensure images are readable and have correct bounding boxes). 3. Check label distribution (Identify imbalance issues). 4. Verify dataset integrity (Detect corrupted images, misaligned labels). **to do** * Plot bounding boxes on images to check if labels are correct. * Count class distributions (e.g., normal vs. cancerous images). * Identify missing values or annotation errors.

Step 1: Basic Dataset Overview

1. Count number of images in train, val, test.
2. Count number of annotation files (should match the number of images).
3. Check if any images are missing annotations.

```python
import os

# Define dataset paths
dataset_path = "/kaggle/input/dataset1-thyroid-cancer"
splits = ["train", "valid", "test"]

for split in splits:
    image_dir = os.path.join(dataset_path, split, "images")
    label_dir = os.path.join(dataset_path, split, "labels")

    num_images = len([f for f in os.listdir(image_dir) if f.endswith(".jpg")])
    num_labels = len([f for f in os.listdir(label_dir) if f.endswith(".txt")])

    print(f"{split.upper()} SET:")
    print(f"  Images: {num_images}")
    print(f"  Labels: {num_labels}")
    print(f"  Missing labels: {num_images - num_labels}\n")
```

```
TRAIN SET:
  Images: 549
  Labels: 549
  Missing labels: 0

VALID SET:
  Images: 102
  Labels: 102
  Missing labels: 0

TEST SET:
  Images: 44
  Labels: 44
  Missing labels: 0
```

Step 2: Label Distribution Analysis 1. Read data.yaml (class names). 2. Count occurrences of each class in the dataset. 3. Visualize class distribution as a bar chart.

```python
[11]: import yaml
      import numpy as np
      import matplotlib.pyplot as plt

      # Load class names from data.yaml
      yaml_path = os.path.join(dataset_path, "data.yaml")
      with open(yaml_path, 'r') as f:
          data_yaml = yaml.safe_load(f)
      class_names = data_yaml["names"]

      # Count occurrences of each class
      class_counts = {i: 0 for i in range(len(class_names))}

      # Read all labels in train set
      label_dir = os.path.join(dataset_path, "train", "labels")
      for label_file in os.listdir(label_dir):
          with open(os.path.join(label_dir, label_file), "r") as f:
              for line in f.readlines():
                  class_id = int(line.split()[0])
                  class_counts[class_id] += 1

      # Plot label distribution
      plt.figure(figsize=(8, 5))
      plt.bar(class_names, list(class_counts.values()), color="skyblue")
      plt.xlabel("Classes")
      plt.ylabel("Count")
      plt.title("Class Distribution in Training Set")
      plt.xticks(rotation=45)
      plt.show()
```
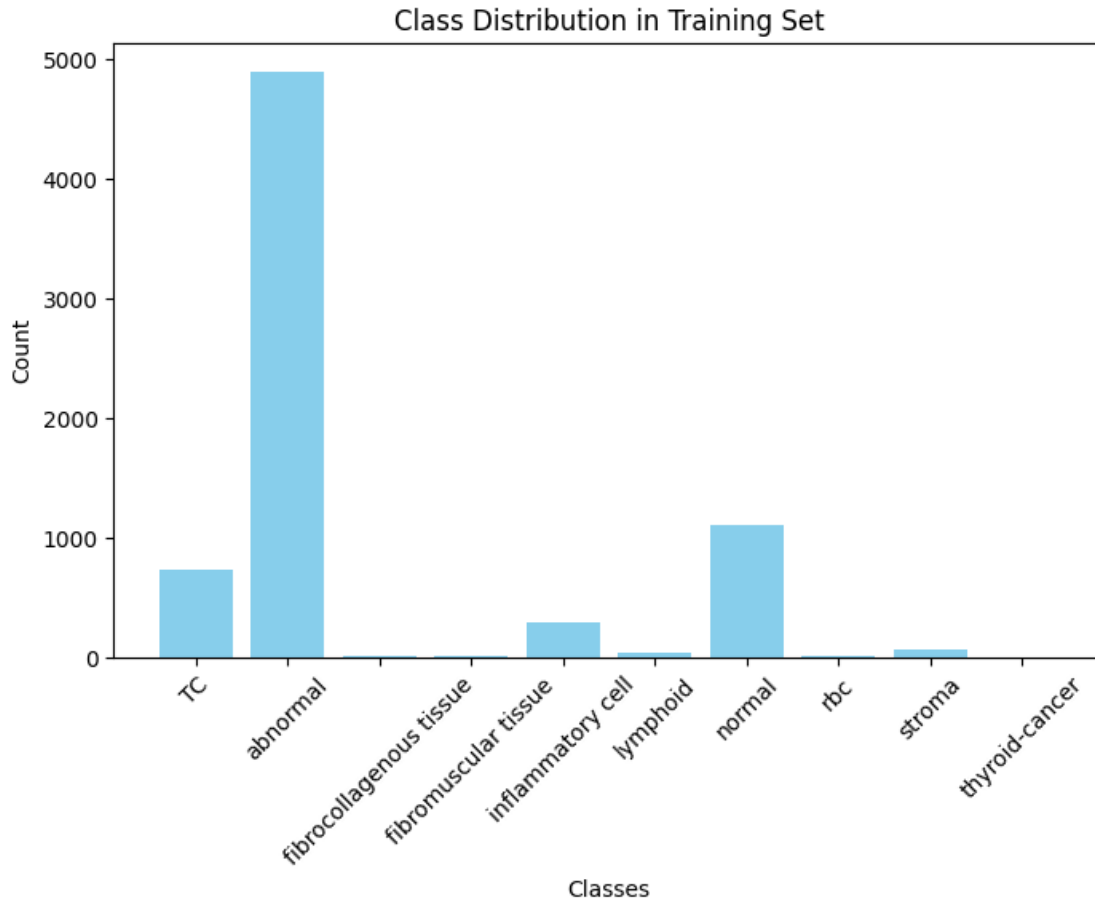

Class Distribution in Training Set

Step 3: Image Visualization 1. Load random sample images from train, val, test. 2. Overlay bounding boxes on images to verify label correctness.

```
[13]: import os
      import cv2
      import random
      import matplotlib.pyplot as plt

      # Define class labels
      class_names = ["Benign", "Malignant", "Other"]  # Update according to your
       ↪dataset

      # Set dataset path
      dataset_path = "/kaggle/input/dataset1-thyroid-cancer"

      def plot_sample_image(image_folder, label_folder):
          image_files = [f for f in os.listdir(image_folder) if f.endswith(".jpg")]
          random_image = random.choice(image_files)
```

```python
    img_path = os.path.join(image_folder, random_image)
    label_path = os.path.join(label_folder, random_image.replace('.jpg', '.
↪txt'))

    img = cv2.imread(img_path)
    img = cv2.cvtColor(img, cv2.COLOR_BGR2RGB)
    h, w, _ = img.shape

    # Draw bounding boxes
    if os.path.exists(label_path):
        with open(label_path, "r") as f:
            for line in f.readlines():
                class_id, x_center, y_center, width, height = map(float, line.
↪strip().split())
                xmin, ymin = int((x_center - width / 2) * w), int((y_center -␣
↪height / 2) * h)
                xmax, ymax = int((x_center + width / 2) * w), int((y_center +␣
↪height / 2) * h)

                # Draw rectangle
                cv2.rectangle(img, (xmin, ymin), (xmax, ymax), (255, 0, 0), 2)
                cv2.putText(img, class_names[int(class_id)], (xmin, ymin - 10),␣
↪cv2.FONT_HERSHEY_SIMPLEX, 0.8, (255, 0, 0), 2)

    plt.imshow(img)
    plt.axis("off")
    plt.title(f"Sample Image: {random_image}")
    plt.show()

# Run for training set
plot_sample_image(os.path.join(dataset_path, "train", "images"), os.path.
↪join(dataset_path, "train", "labels"))
```
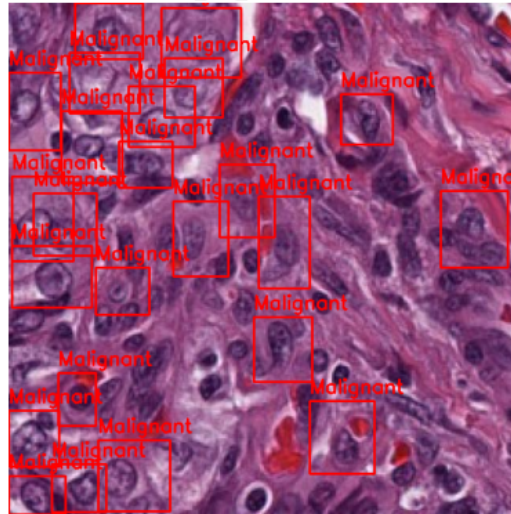

Sample Image: TCGA-DJ-A3VJ-01Z-00-DX1_32_jpg.rf.93b6d323d12b75b3bb6d76d835f56c4e.jpg

Step 4: Check for Missing/Corrupt Data 1. Identify images without labels (or vice versa). 2. Detect and remove corrupt images.

```python
[14]: from PIL import Image

def check_corrupt_images(image_folder):
    corrupted_files = []
    for file in os.listdir(image_folder):
        if file.endswith(".jpg"):
            img_path = os.path.join(image_folder, file)
            try:
                img = Image.open(img_path)
                img.verify()  # Verify if image is corrupted
            except Exception as e:
                corrupted_files.append(file)

    print(f"Corrupt Images: {len(corrupted_files)}")
    if corrupted_files:
        print(corrupted_files)

# Check for corrupt images in training set
check_corrupt_images(os.path.join(dataset_path, "train", "images"))
```

Corrupt Images: 0

Next Steps After EDA

Preprocessing: Resize images, normalize, clean missing data. Data Augmentation: Apply transformations to increase dataset diversity. Saving Processed Data: Store cleaned & augmented data for training

Thyroid Cancer Image Preprocessing

1. Resizing Images: Images are resized to a target size of 640×640.

2. Normalizing Pixel Values: Images are normalized to have pixel values between 0 and 1.

3. Copying Labels: Corresponding label files are copied to the processed folder.

Training Data Augmentation

augment the training images and corresponding label files to improve the diversity of the training dataset. The augmentation pipeline applies several transformations while preserving the integrity of the bounding box annotations in YOLO format (LIKE normalized values). Below are the details of the steps and transformations:

- Source Data:

The augmentation is applied on the processed training images and label files from step 1.

- Augmented Data Directories:

Augmented images and labels are saved into separate directories:

- Augmentation Pipeline:

The pipeline uses the Albumentations library with the following transformations:

1. Horizontal Flip (p=0.5): Randomly flips the image along the horizontal axis.

2. Rotation (limit=20, p=0.5): Rotates the image randomly within ±20 degrees.

3. Random Brightness/Contrast (p=0.3): Adjusts brightness and contrast to simulate various lighting conditions.

4. Gaussian Blur (blur_limit=(3, 7), p=0.3): Applies a Gaussian blur effect to mimic camera or focus variations.

5. Gauss Noise (var_limit=(10.0, 50.0), p=0.3): Adds random noise to the image, simulating sensor noise.

All transformations are applied while maintaining the integrity of the YOLO-format bounding boxes through the use of bbox_params.

- Augmentation Function:

A custom function augment_image_and_labels reads an image and its corresponding label file, applies the transformations, and returns the augmented image along with updated bounding box coordinates and category IDs.

- Loop for Processing:

Then iterates over each training image, applies the augmentation, and then:

1. Saves the augmented image.
2. Saves the augmented label file in YOLO format (each value formatted to 6 decimal places).

```

```

Augmentation for training split completed. Augmented data saved to
data/processed/dataset1/train_aug/images

```
[33]: !ls /kaggle/working/data/processed/dataset1
```

```
test  train  train_aug  valid
```

Export Processed Dataset for Download

Once the dataset has been preprocessed and augmented, we need to compress it into a ZIP file for easy download. The following steps will:

1. Compress the dataset into a ZIP archive.

2. Generate a downloadable link so you can retrieve the processed dataset.

[34]:
```
!zip -r processed_dataset1.zip /kaggle/working/data/processed/dataset1
```

```
